REBAR

STEEL REINFORCING BAR

- Reinforce and increase strength of concrete
- Minimize cracks in the structure
- Available thicknesses are 5/16", 7/16" and 5/8".

EPOXY-COATED REINFORCING BAR

- Reinforce and increase the strength of concrete
- Minimize cracks in the structure
- Epoxy helps protect bars against corrosion
- Available thicknesses are 3/8"

METALTECH®

**BUILT TOUGH FOR
SAFETY**

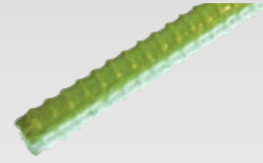

REBAR

Metaltech has added rebars to its product range. Reinforcing bars are steel rods with ridges used to reinforce concrete.

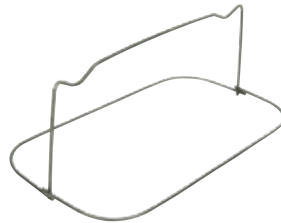

We also have epoxy-coated reinforcing bar. The epoxy coating provides an additional protection against corrosion. Corrosion occurs when chlorides reach the rebar in the concrete.

Available lengths vary from 1 ft to 8 ft which are short and convenient for smaller projects and installations. You won't need to cut longer bars on the job site.

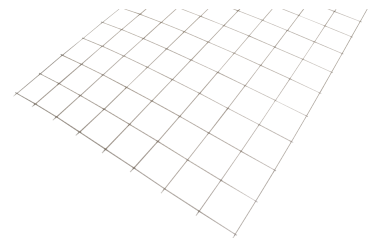

Available thicknesses are 5/16", 7/16", 3/8" and 5/8".
